ALARSIO

USER HANDBOOK · PILOT EDITION · NOVEMBER 2026

YOUR SITE RECORD, EVEN WITH NO SIGNAL.

Step-by-step instructions for owners, project managers, supervisors and accountants: setting up your company, recording attendance, reports and materials on site, and turning approved attendance into wages.

Owner
Sets up the company, team, sites and workers. Reopens wages. Exports data.

Project manager
Runs sites, approves attendance, reviews reports. Can record on site.

Supervisor
Checks in, marks the register, files the daily report, records materials. On the phone.

Accountant
Builds wage summaries from approved attendance, locks periods, exports.

CONTENTS

WHAT'S IN THIS HANDBOOK

1 How Alarsio works
Roles, the daily flow, working with no signal

2 Set up your company
Owner · create an account and an organisation

3 Invite your team
Owner · invite by email or link

4 Sites
Owner, PM · add a site, its location, assign supervisors

5 Workers and wage rates
Owner, PM · add, import, rates, assign to sites

6 The phone app on site
Supervisor, PM · install, check in, register, report, materials

7 Reviewing on the web
PM, owner · overview, approve days, review reports, materials

8 Wage summaries
Accountant, owner · periods, adjustments, lock, export

9 Export your data
Owner · download everything

10 Troubleshooting
What you see, why, and what to do

ABOUT THE PICTURES

Web screens are real screenshots from alarsio.com using a sample company, "Audit Test Co". Numbered red pins match the numbered notes under each picture. Phone screens are drawn illustrations showing the real buttons and words of the app; your phone may look slightly different.

Where each person works

Wage summaries	✓ web, reopen	—	—	✓ web, lock
Export all company data	✓ web	—	—	—

1 HOW ALARSIO WORKS

EVERYONE

Alarsio replaces the site notebook and the WhatsApp photo with one record that the office can trust. Supervisors record what happens on site on their phone, even with no signal. Managers check it on the web. Only approved attendance is ever paid.

1.1 A day on Alarsio

MORNING · PHONE		MORNING · PHONE		EVENING · PHONE		NEXT DAY · WEB		WEEK / MONTH · WEB
Check in Supervisor checks in at the site.	→	**Register** Mark everyone present, change the exceptions.	→	**Daily report** Work done, blockers, safety, plan, photos.	→	**Approve** Project manager approves the day and reviews the report.	→	**Wages** Accountant builds the wage summary and locks it.

1.2 Working with no signal

Everything a supervisor records is saved on the phone first, the moment it is entered. When the phone finds a signal, the records go to the server in order. Nothing is lost if the app is closed or the phone restarts.

Each record shows where it is:

YOU SEE	WHAT IT MEANS	WHAT TO DO
OFFLINE / **Waiting for connection**	Saved on this phone. Not on the server yet.	Nothing. It sends by itself when there is a signal.
Sending…	Being sent now.	Wait.
ON THE SERVER	The server has accepted it. Your manager can see it.	Nothing.
NEEDS ATTENTION	The server could not take it as it is, for example the day was already approved.	Open it and read the reason (see chapter 10).
Submitted	A daily report the server has accepted.	Nothing.

> THE ONE PROMISE
> Alarsio never says **On the server** or **Submitted** until the server has really accepted the record. If you see it, your manager can see it.

1.3 The four roles

Every person in your company has exactly one role. The role decides what they see, on the web and on the phone. A supervisor sees only the sites they are assigned to.

- **Owner** · the person who created the company. Can do everything on the web, and is the only one who can reopen a locked wage period and export all data.

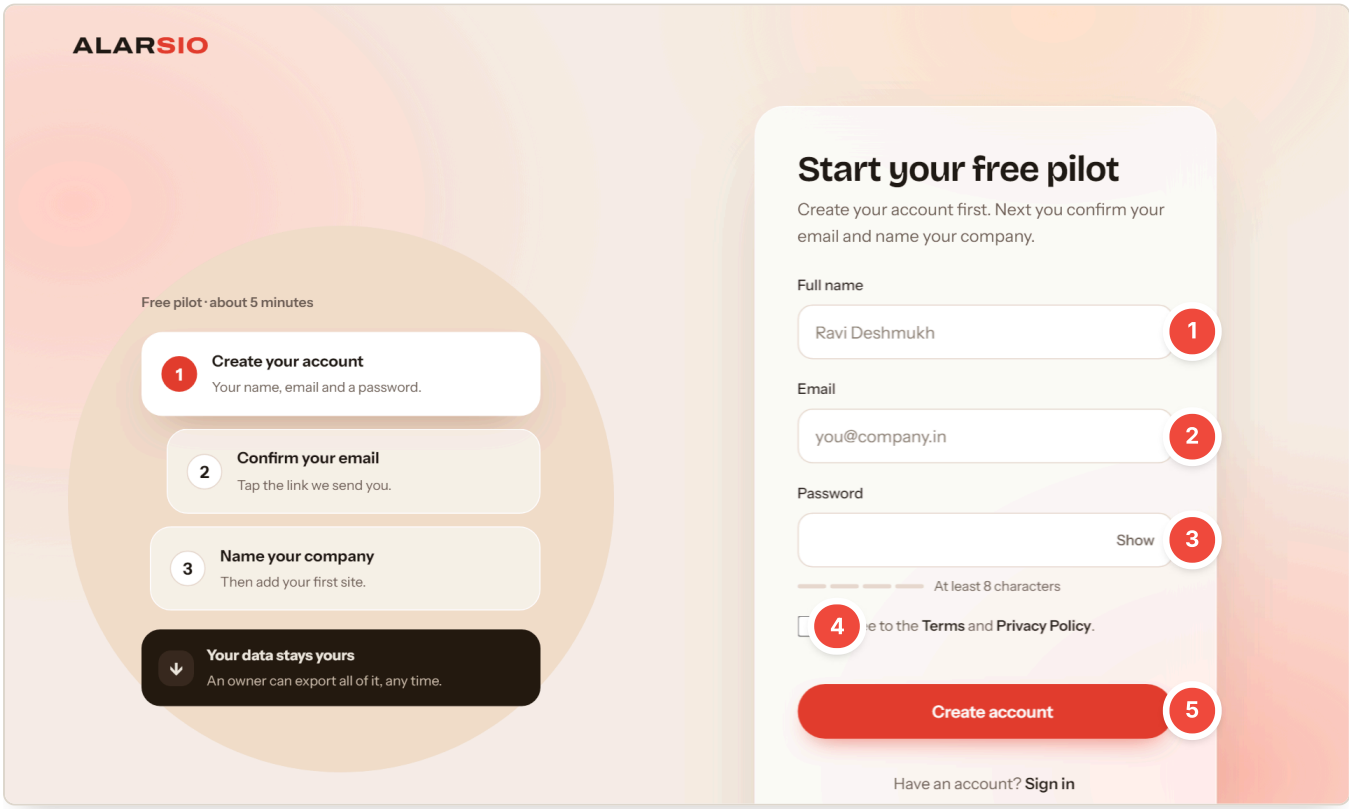

- **Project manager** · runs sites, workers and materials, approves attendance and reviews reports. Can also use the phone app. Never reviews a day or report they recorded themselves.
- **Supervisor** · works on site with the phone app. On the web they can read their own daily reports and what a manager said.
- **Accountant** · reads workers and approved attendance, builds and locks wage periods. Cannot reopen a locked period.

2 SET UP YOUR COMPANY

OWNER · WEB · ALARSIO.COM

The owner sets up Alarsio once, on a computer or phone browser. It takes about ten minutes.

2.1 Create your account

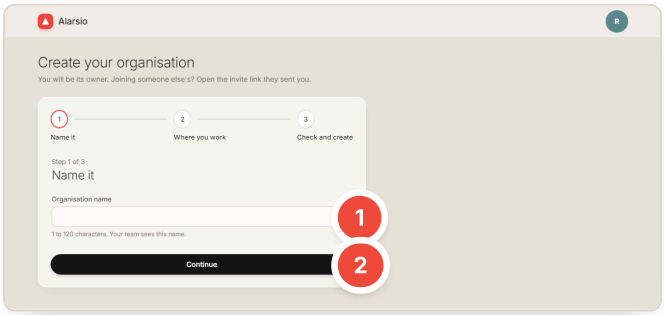

1. Your full name, as your team should see it.
2. Your email. The verification link goes here.
3. A password of at least 8 characters. Tap **Show** to check it.
4. Tick to agree to the Terms and Privacy Policy.
5. **Create account**.

1. Go to **alarsio.com** and tap **Start free pilot**, or open **alarsio.com/sign-up**.
2. Fill in the form and tap **Create account**.
3. Open the email from Alarsio and tap the link. It signs you in and opens your dashboard. Check your spam folder if it has not arrived in a few minutes.

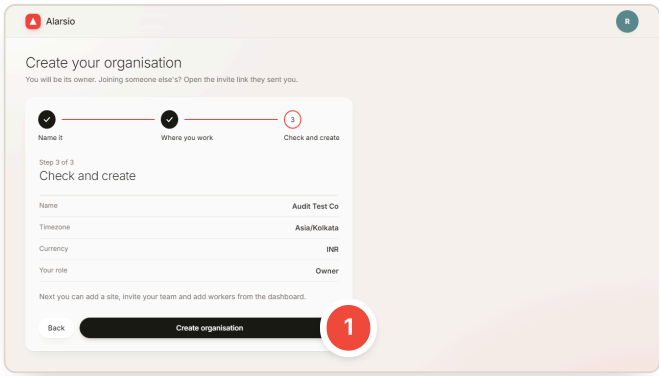

> TIP
> Type your real name at sign-up. It is shown to your team on assignments and invites.

2.2 Create your organisation

After your first sign-in, Alarsio asks you to create your organisation. You become its **owner**.

Step 1 of 3: type your company's name **(1)**, then **Continue** **(2)**.

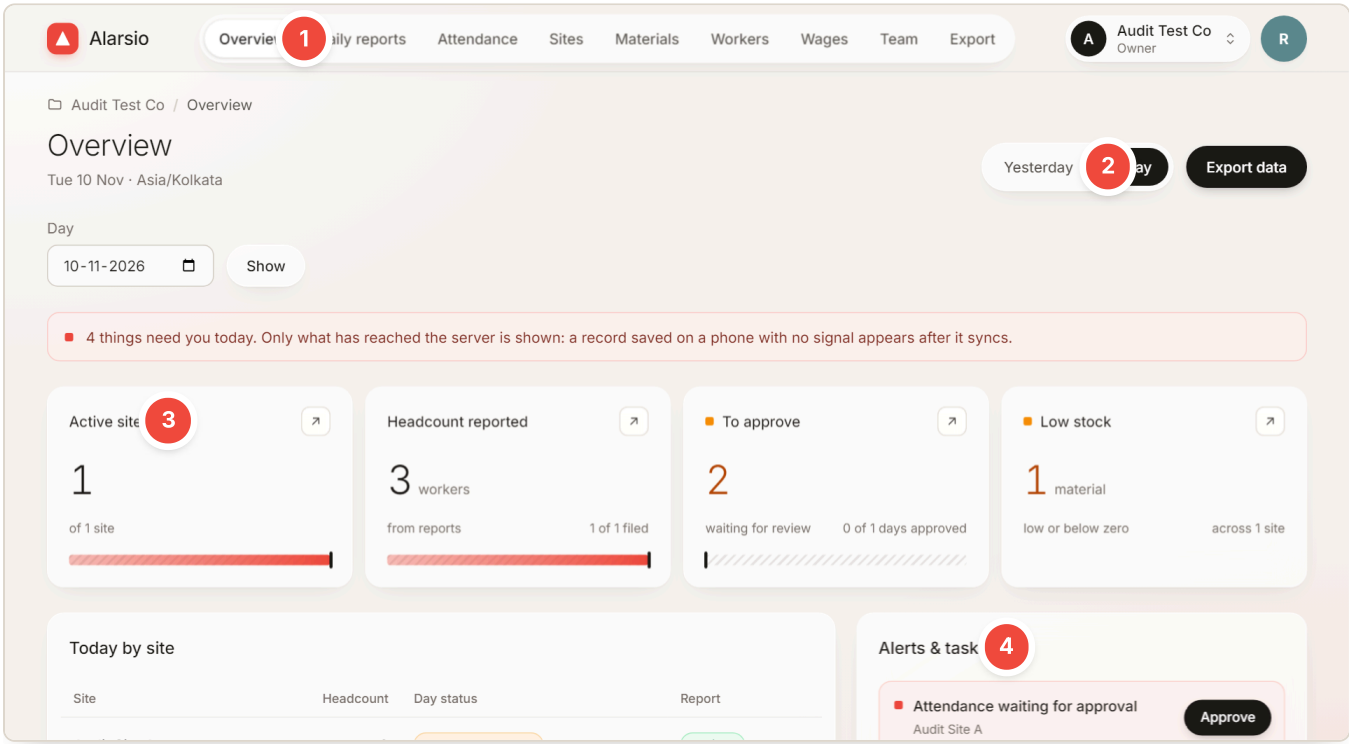

Step 3 of 3: check the name, timezone, currency (INR) and your role, then **Create organisation** **(1)**.

1. **Name it.** Your company's name, 1 to 120 characters. Your team sees this name.
2. **Where you work.** The timezone is set to Asia/Kolkata. Change it only if your sites are elsewhere. Currency is always INR.
3. **Check and create.** Tap **Create organisation** **once** and wait. It can take a few seconds; you then land on the Overview.

> **TAP ONCE**
> "Create organisation" may take several seconds to respond. Tapping it again can create a second company. If nothing seems to happen, wait, then reload the page: your company will be there.

2.3 Find your way around

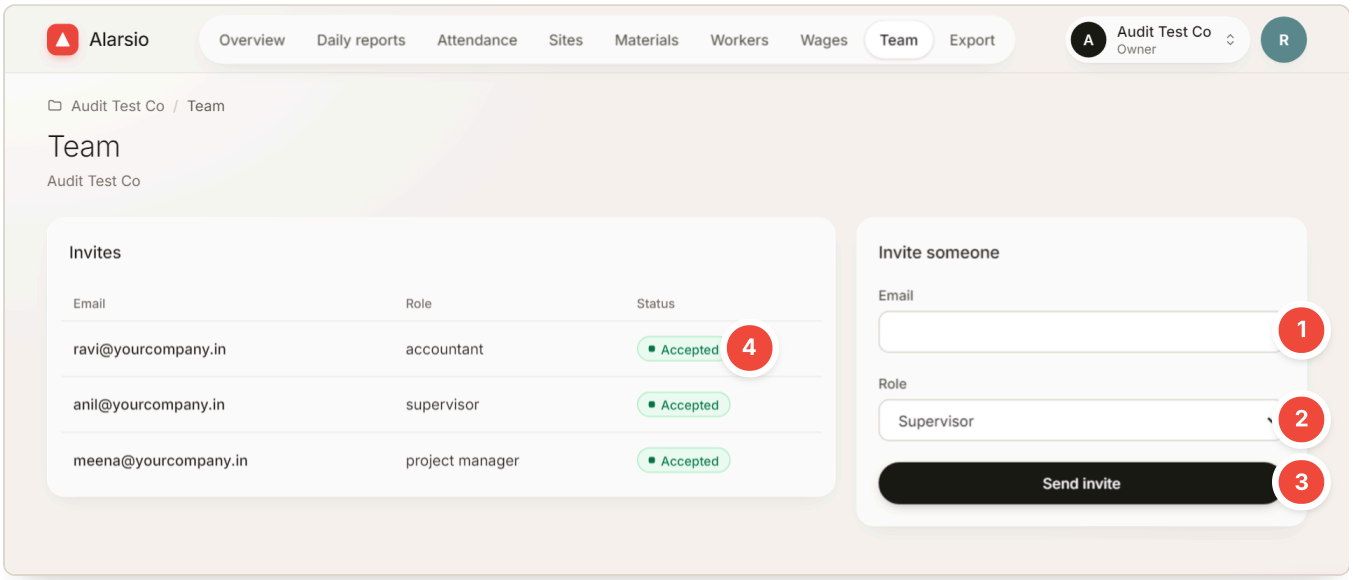

1. The menu. You see only the pages your role can use.
2. Switch between yesterday and today.
3. Summary tiles: active sites, headcount, days to approve, low stock.
4. Alerts and tasks: what needs you first.

The box at the top right shows your company and your role. If you belong to more than one company, switch between them there.

3 INVITE YOUR TEAM

OWNER · WEB · TEAM

Everyone joins your company by invitation. Only the owner can invite. Each invite is for one role.

1. The person's email address.
2. Their role: owner, project manager, supervisor or accountant.
3. **Send invite**.
4. The list shows each invite and whether it was accepted.

1. Open **Team** in the menu.
2. Enter the email, pick the role and tap **Send invite**.
3. Alarsio emails the invite and also shows the **invite link** once. Copy it and send it on WhatsApp if the email is slow.
4. The person opens the link, creates an account (or signs in) and taps **Join the team**.

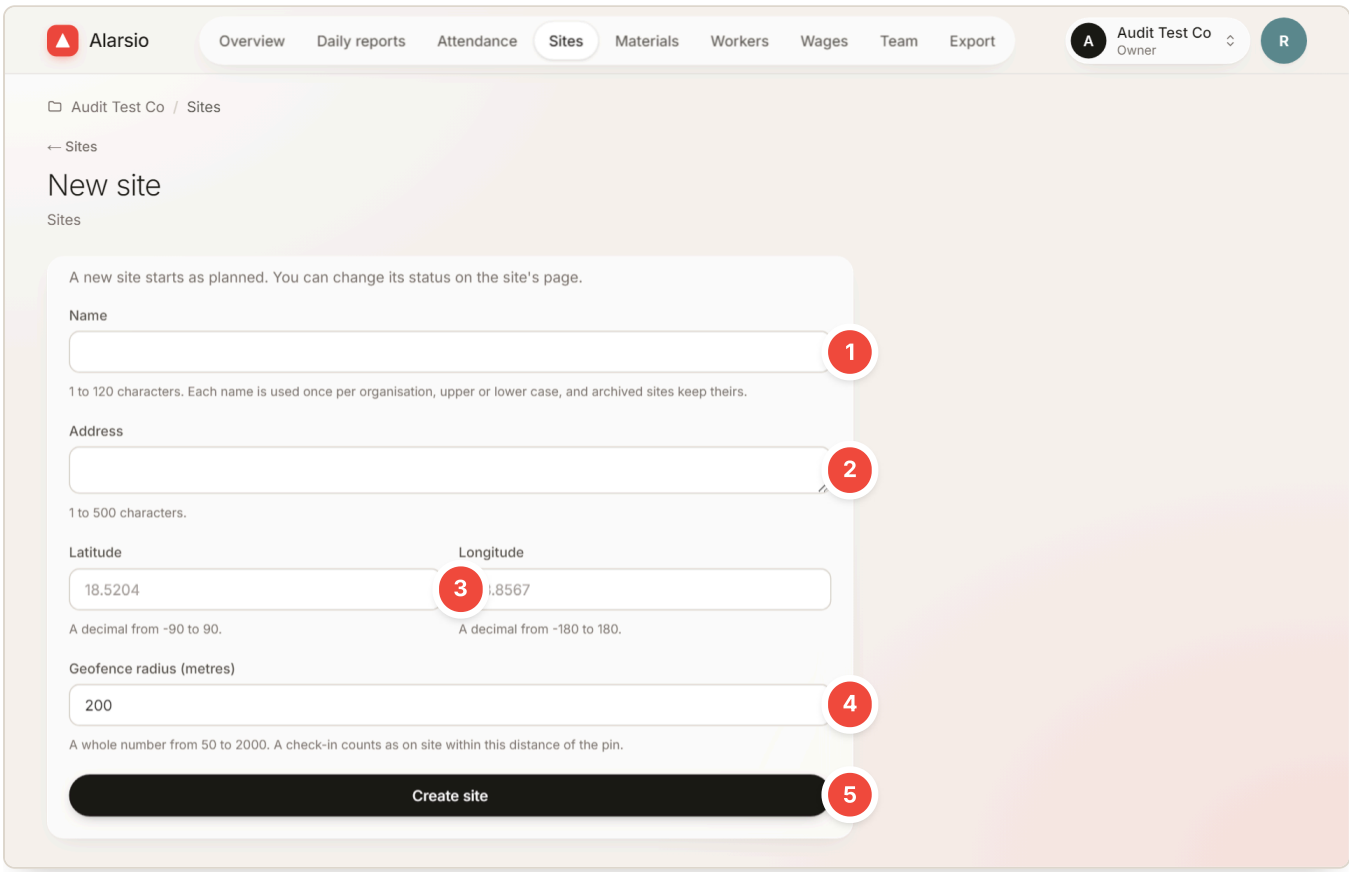

> **INVITE LINKS**
> A link works **once**, for **72 hours**, for whoever opens it. Send it only to the right person. If it was sent to the wrong person, tap **Revoke** next to it and send a new one.

4 SITES

OWNER · PROJECT MANAGER · WEB · SITES

A site is a place where work happens. Its map pin and radius decide whether a check-in counts as "on site".

4.1 Add a site

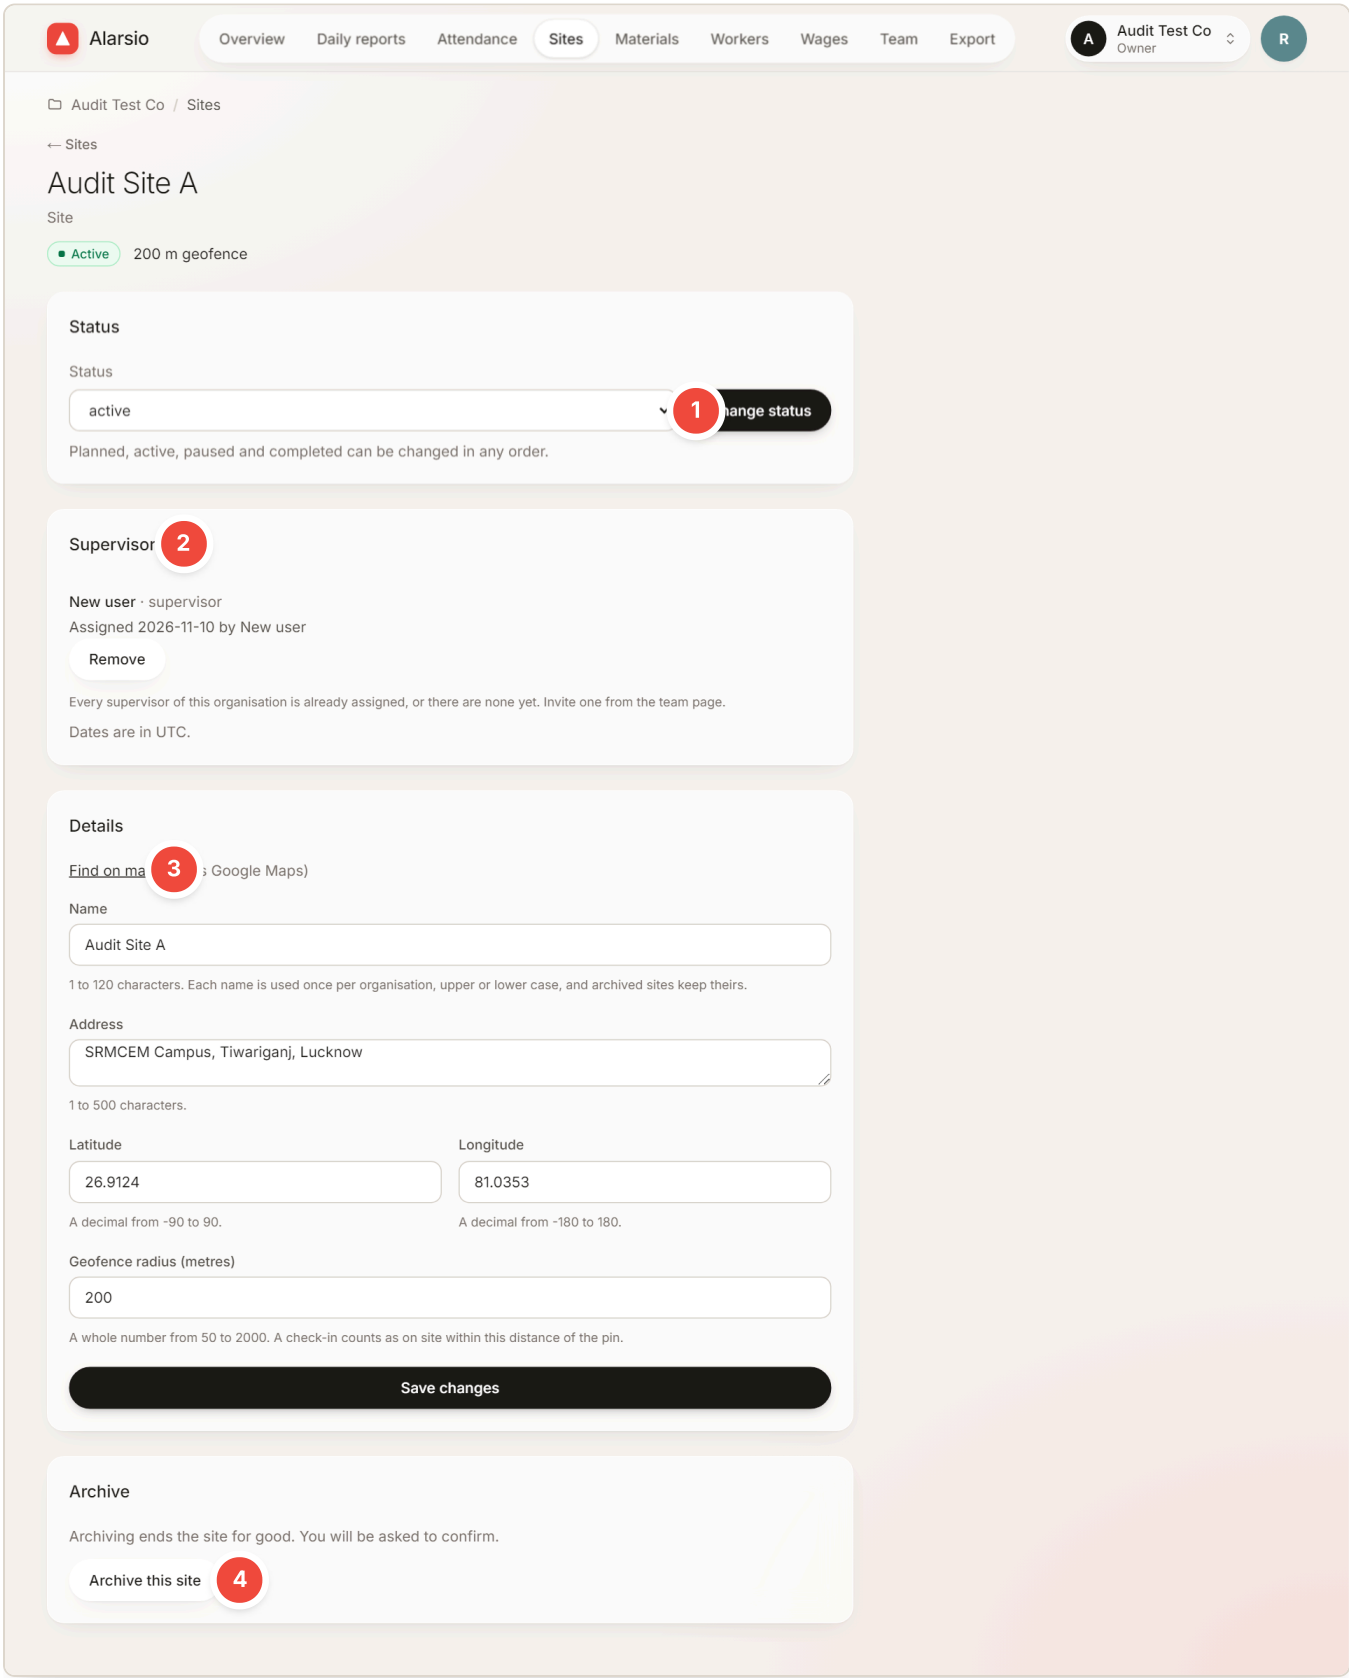

1. Name. Each name is used once in your company.
2. Address.
3. The pin: latitude and longitude, as decimals.
4. Radius in metres, 50 to 2000. Default 200.
5. **Create site**.

> **GETTING THE PIN FROM GOOGLE MAPS**
> Stand at the site gate (or find it on the map), long-press the spot in Google Maps, and copy the two numbers shown at the top, for example `26.91240, 81.03530`. The first is the latitude, the second the longitude.

A new site starts as **planned**. Open it and set its status to **active** when work starts.

4.2 Status, supervisors and archiving

1. Status: planned, active, paused or completed, in any order. **Change status**.
2. Supervisors: pick one and tap **Assign**; **Remove** takes them off. History is kept.
3. Open the pin in Google Maps to check it.
4. **Archive this site** when the job is over.

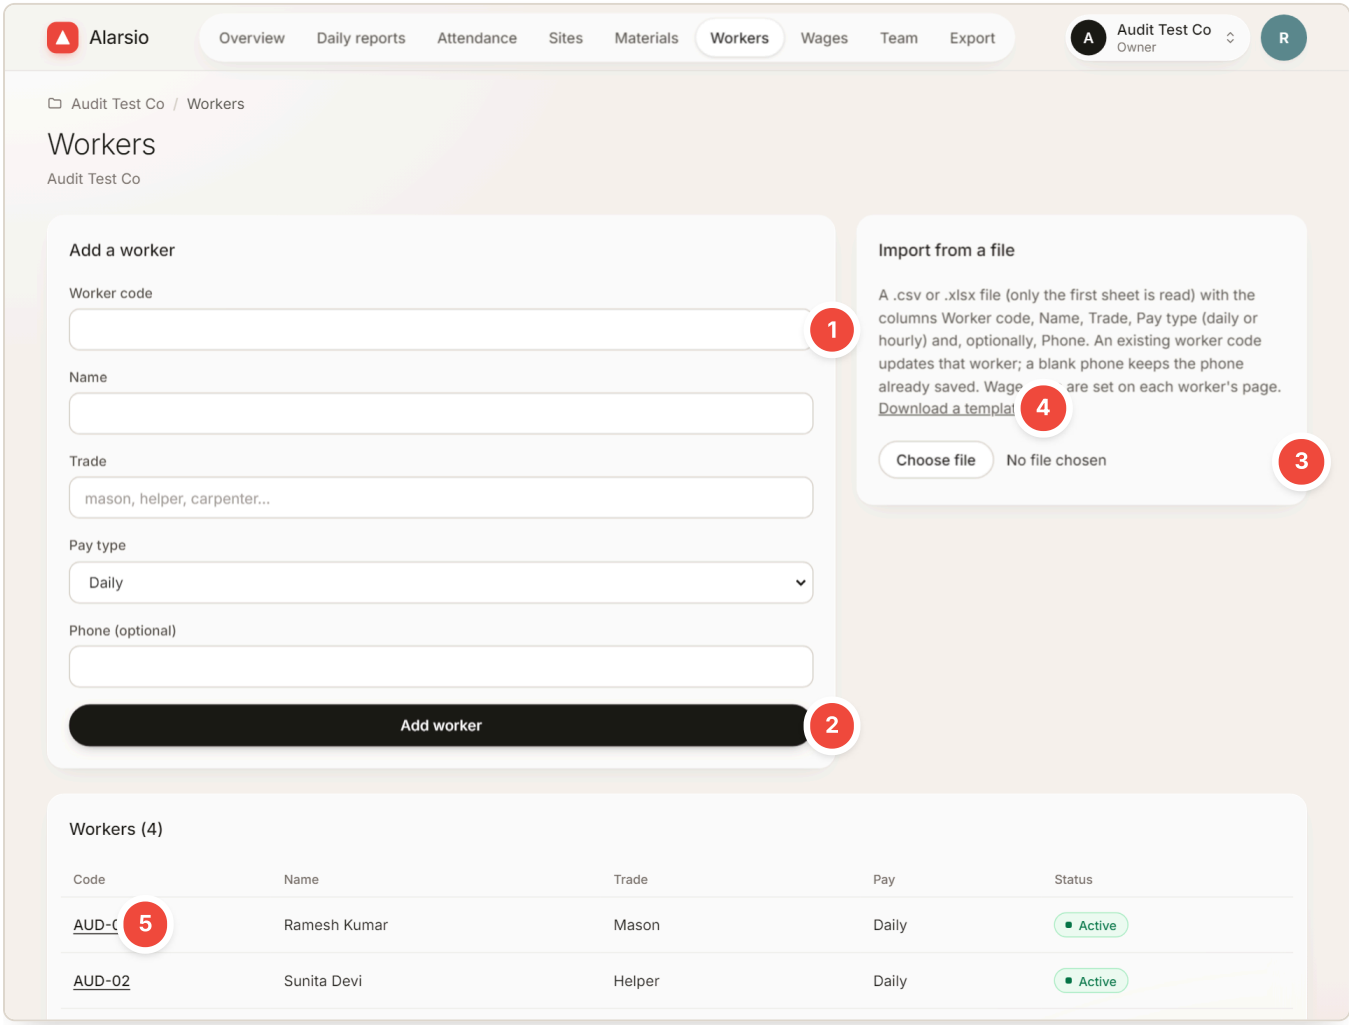

- A supervisor sees and records **only** the sites they are assigned to.

- Edit the name, address, pin or radius under **Details** and tap **Save changes**.
- **Archiving cannot be undone.** Alarsio asks you to confirm. The site becomes read-only, everyone assigned is taken off it, its history stays and its name stays taken.

5 WORKERS AND WAGE RATES

OWNER · PROJECT MANAGER · WEB · WORKERS

Workers are the people on your sites. They do not log in. Each has a **worker code** that you choose, such as `W-001`.

1. Add one worker: code, name, trade, pay type (daily or hourly), phone.
2. **Add worker**.
3. Or import many from a file.
4. Download a template file to fill in.
5. Your workers. Open one to set rates and sites.

5.1 Import workers from Excel or CSV

1 Tap **Download a template**, or make a sheet with these columns (any order, first sheet only):

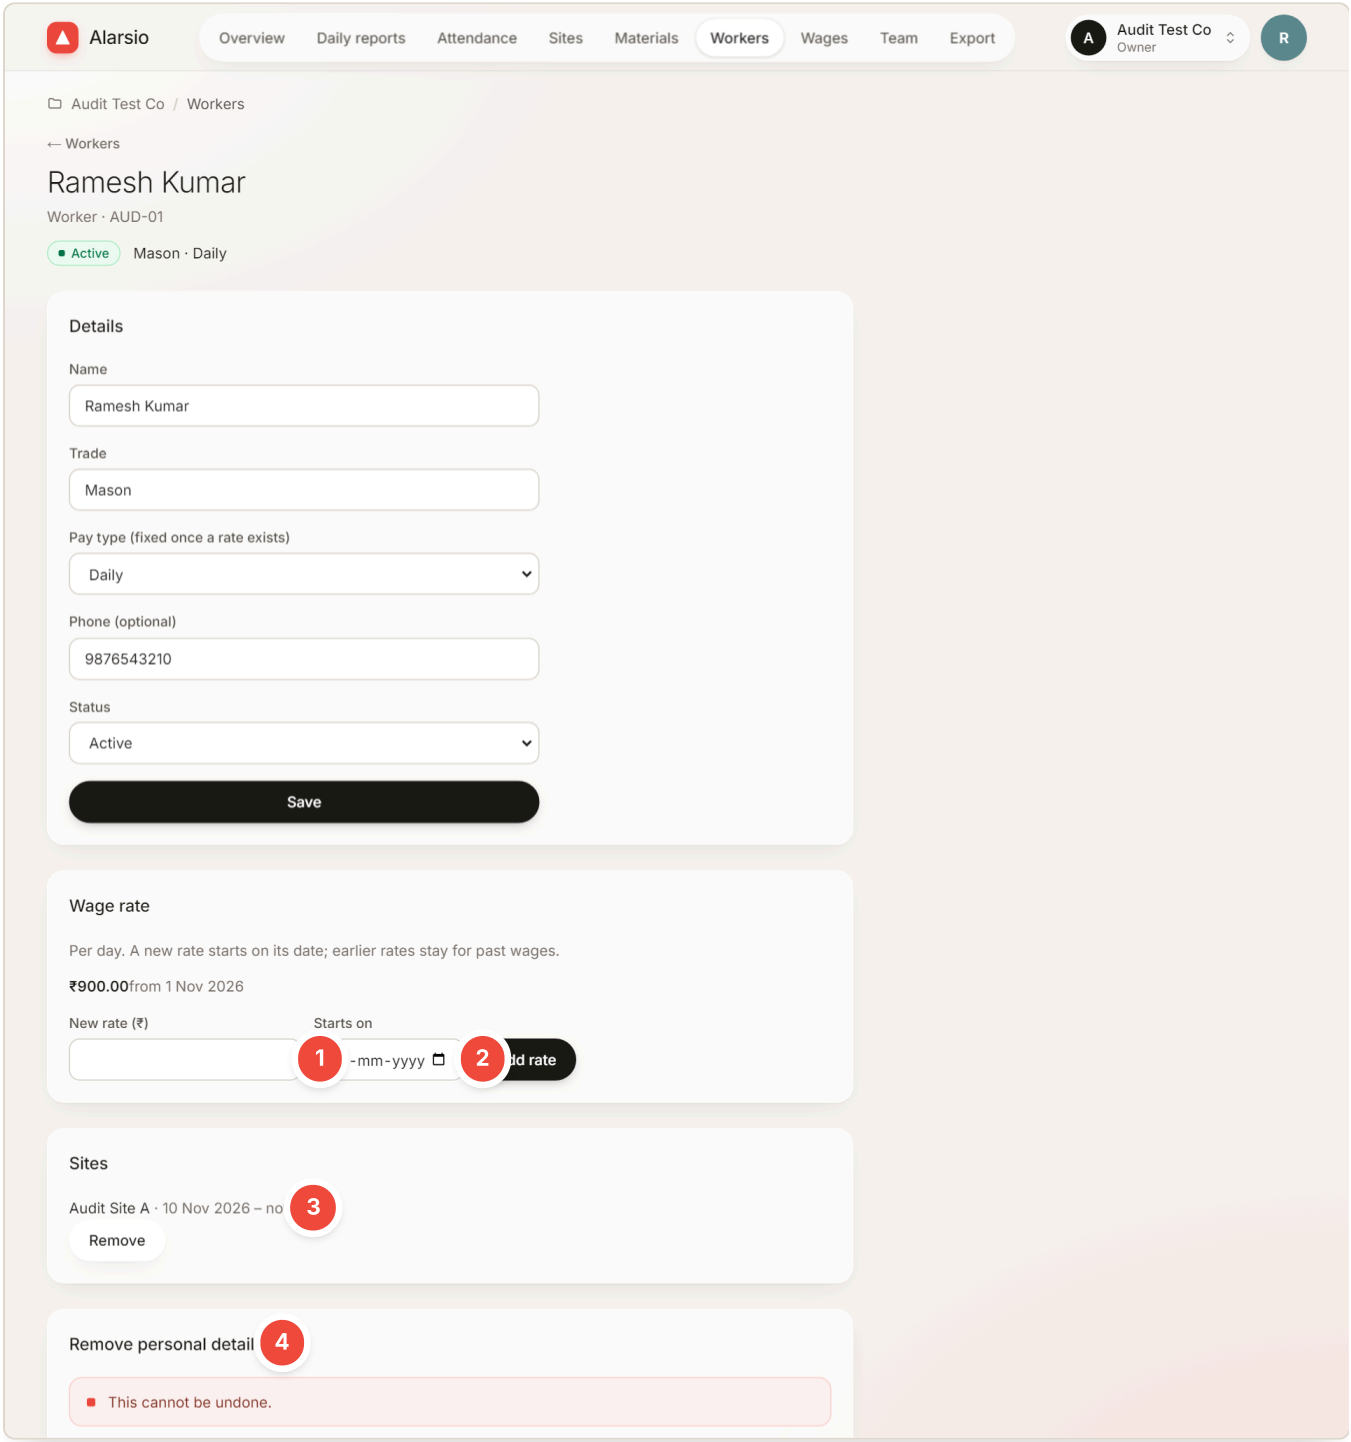

WORKER CODE	NAME	TRADE	PAY TYPE	PHONE (OPTIONAL)
W-001	Ramesh Kumar	Mason	daily	98765 43210
W-002	Sunita Devi	Helper	hourly	

2 Wait until the Workers page has fully loaded, then choose the file. Alarsio says how many workers are ready, for example *"5 workers ready to import"*.

3 Tap **Import 5**. The result says how many were **added**, **updated**, **rejected** and **skipped**, with the line number and reason for each problem.

> **IMPORTING AGAIN IS SAFE**
> A worker code that already exists **updates** that worker instead of adding a duplicate. A blank phone keeps the phone already saved. Fix the rejected lines and import the file again.

5.2 Wage rates and sites

1. New rate in rupees (per day or per hour).
2. The date it starts. **Add rate**.
3. The sites this worker is on. Pick another under **Add to site** and tap **Assign**.
4. Remove personal details when someone leaves.

- **Rates are never overwritten.** A new rate starts on its date; earlier rates stay for past wages. One rate per start date.
- The pay type (daily or hourly) is fixed once a worker has a rate.
- A worker appears in a site's register only when assigned to that site.
- **Remove personal details** clears the name and phone, marks the worker inactive and ends their site assignments. Their attendance and wage history stays. It cannot be undone.

6 THE PHONE APP ON SITE

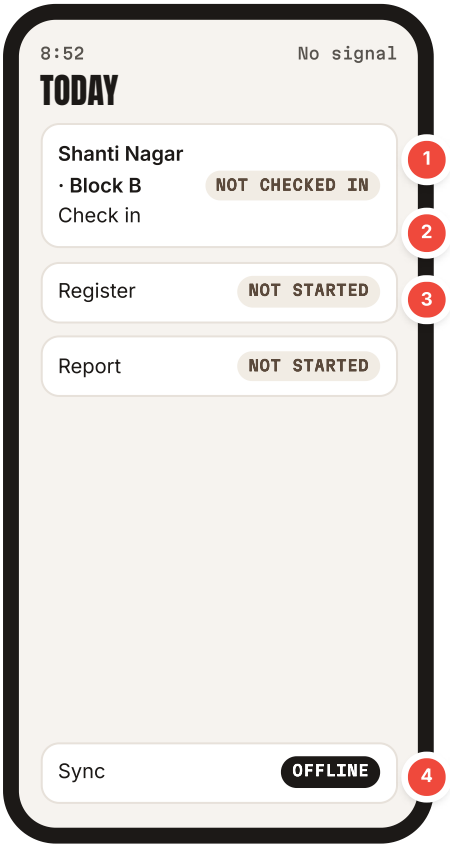

SUPERVISOR · PROJECT MANAGER · ANDROID APP

6.1 Install and sign in

1. On the Android phone, open **alarsio.com/download** and tap the download button. When Android asks, allow installs from your browser, then install.
2. Open Alarsio and sign in with the email and password from your invite. Tick **Stay signed in**.
3. A short tutorial, "How Alarsio works", explains the app. Tap **Next** or **Skip**.
4. Sign in once **with a signal** so the phone downloads your sites. After that the app opens with no signal.

> WHO USES THE APP
> The phone app is for supervisors and project managers. An owner or accountant who signs in is shown "Reviews, wages and the overview are on the web at alarsio.com" with a button to open the website.

6.2 The Today screen

ILLUSTRATION

Today lists each of your sites with three rows. Tap a row to open it.

1. **Check in** · shows "Checked in ✓" once done.
2. **Register** · the day's attendance for your workers.
3. **Report** · the daily report.
4. **Sync** · Offline, sending, or all sent. Tap it for **Sync now** and the records that need attention.

Materials opens stock for your sites. The Help menu has the tutorial, support contacts and the privacy policy.

6.3 Check in and check out

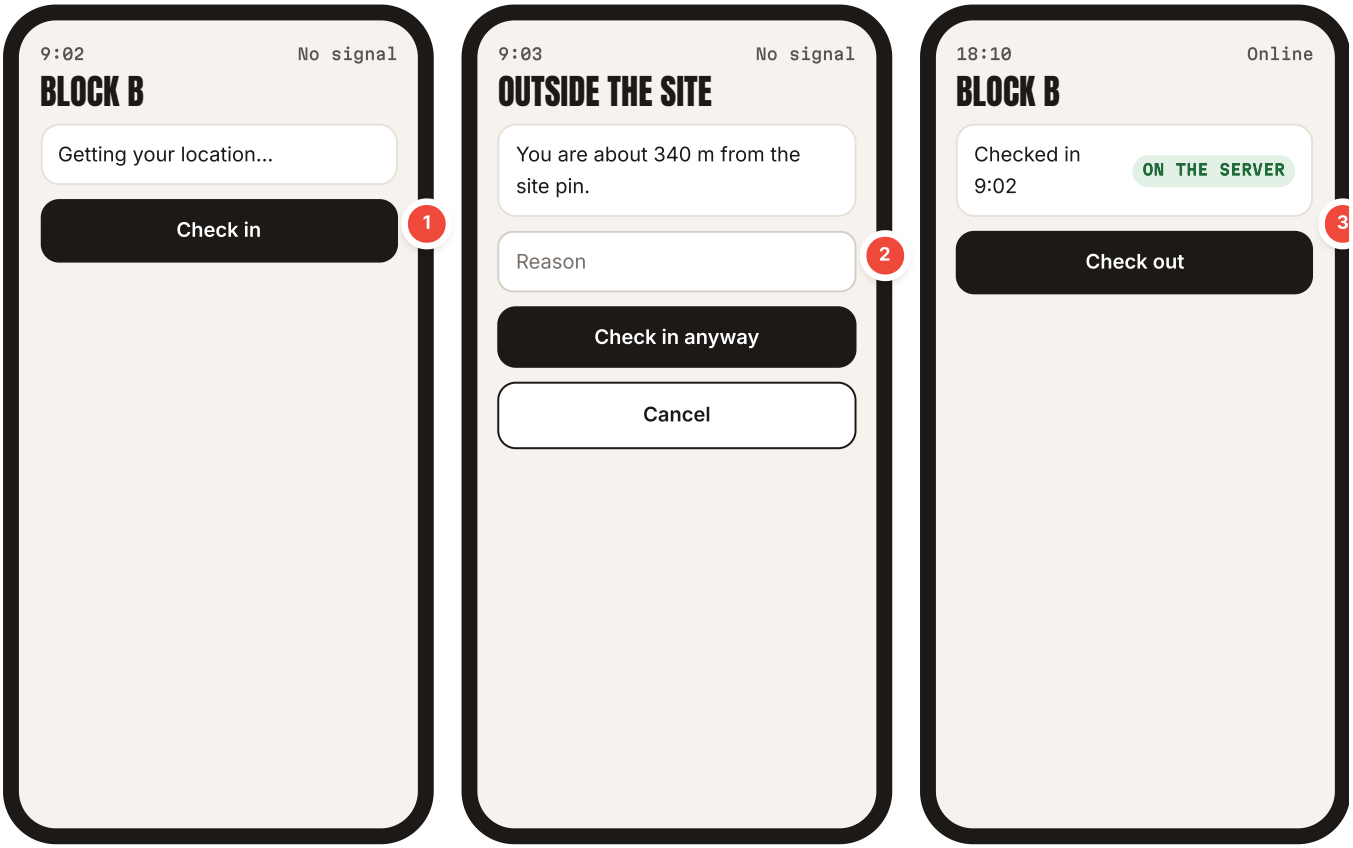

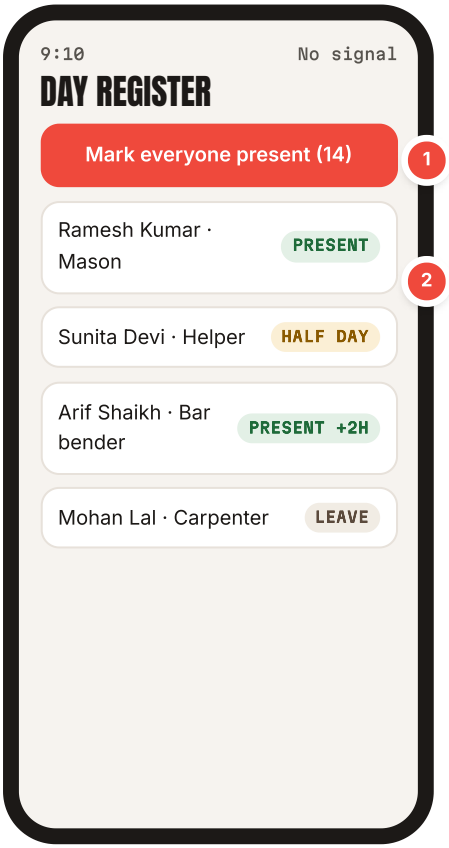

ILLUSTRATION ILLUSTRATION ILLUSTRATION

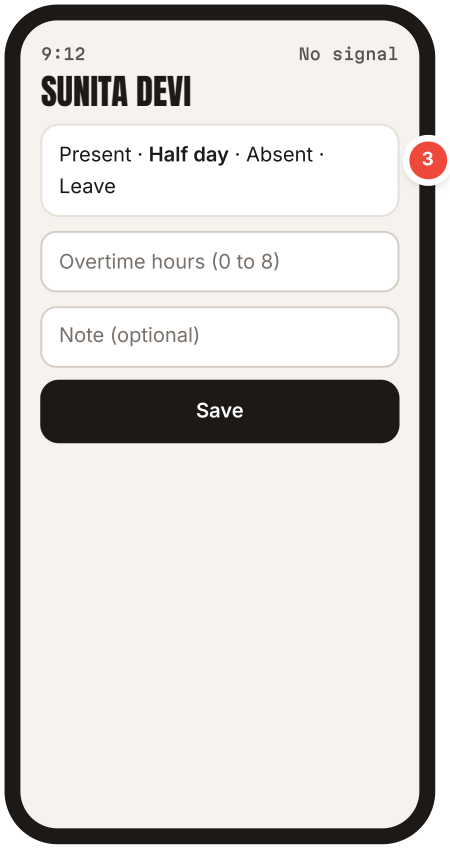

1. At the site, tap **Check in**. The phone reads your location **only on this tap**; Alarsio does not track you in the background. The first time, Android asks for location permission.
2. If you are outside the site's radius, Alarsio asks for a **reason** (for example "Gate is 300 m from the pin"). Type it and tap **Check in anyway**. Your manager sees the reason.
3. When you leave, tap **Check out**. Forgot yesterday? Today shows **Check out (yesterday)**.

> **LOCATION REFUSED?**
> You can still check in: Alarsio asks for a reason instead. Turn location back on later in Android Settings → Apps → Alarsio → Permissions.

6.4 The day register

ILLUSTRATION

ILLUSTRATION

1. Tap **Mark everyone present**: every unmarked worker is set to present in one tap.
2. Then tap only the exceptions.
3. Choose present, half day, absent or leave; add overtime (0 to 8 hours, present or half day only) and a note; **Save**.

Use **Earlier day** and **Later day** to move between dates. There is no submit button: every change is saved at once and sent when there is a signal.

AFTER A MANAGER APPROVES THE DAY

The day becomes read-only. To change it, tap the worker and propose a **correction** with a reason (*"Why should this change?"*). The manager approves or rejects it on the web. Alarsio keeps the old value, the new value and the reason.

6.5 The daily report

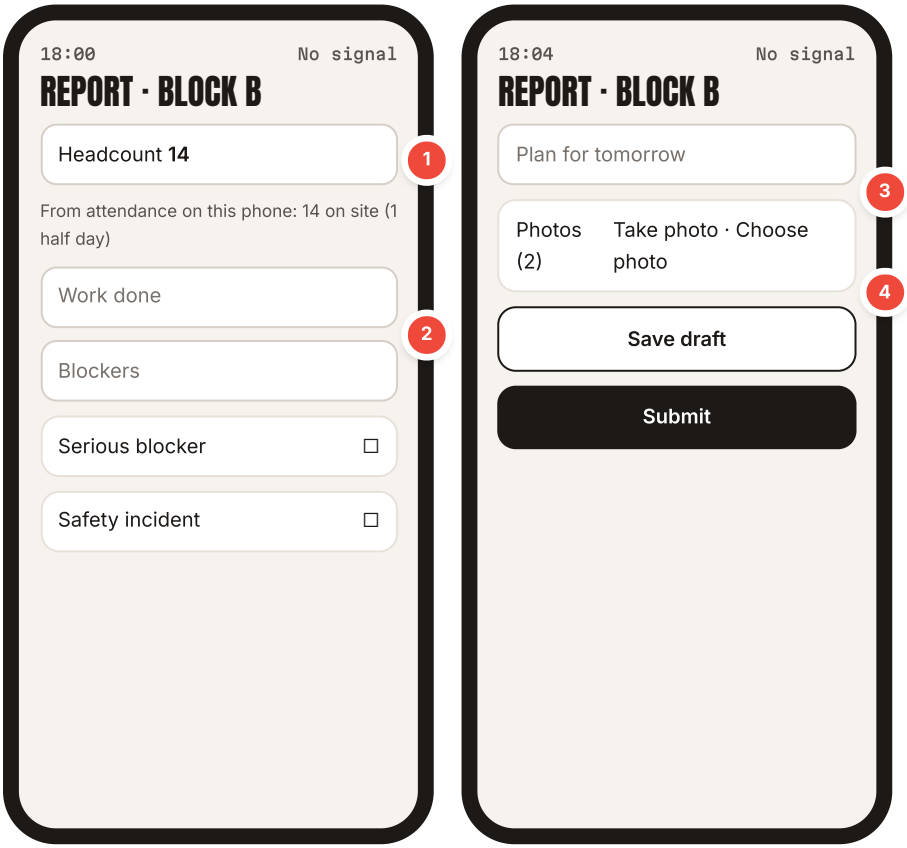

ILLUSTRATION ILLUSTRATION

1. **Headcount** is filled in from your register and says where it came from. Change it if needed.
2. Tick **Serious blocker** or **Safety incident** to flag the report to managers.
3. Up to ten photos. Photos never stop a report from being sent.
4. **Save draft** to finish later, or **Submit**.

- A draft stays on the phone, exactly as typed, even after the app is closed. Today shows **Not finished** reports.
- The report shows **Submitted** only after the server accepts it.
- To change a submitted report, open it, edit, give a reason and tap **Send changes**. Every version is kept.
- If a manager **sends back** your report, read their note on the web (**alarsio.com → Daily reports**), then edit and send it again from the phone.

6.6 Materials on site

Open **Materials**, pick the site, then the material. Choose what happened and enter the quantity:

CHOOSE	WHEN	REASON
Opening stock	The first count when you start using Alarsio at this site.	Optional
Received	A delivery arrived.	Optional
Used	Material was used up on site.	Optional
Adjustment	A recount, damage or loss.	**Required**

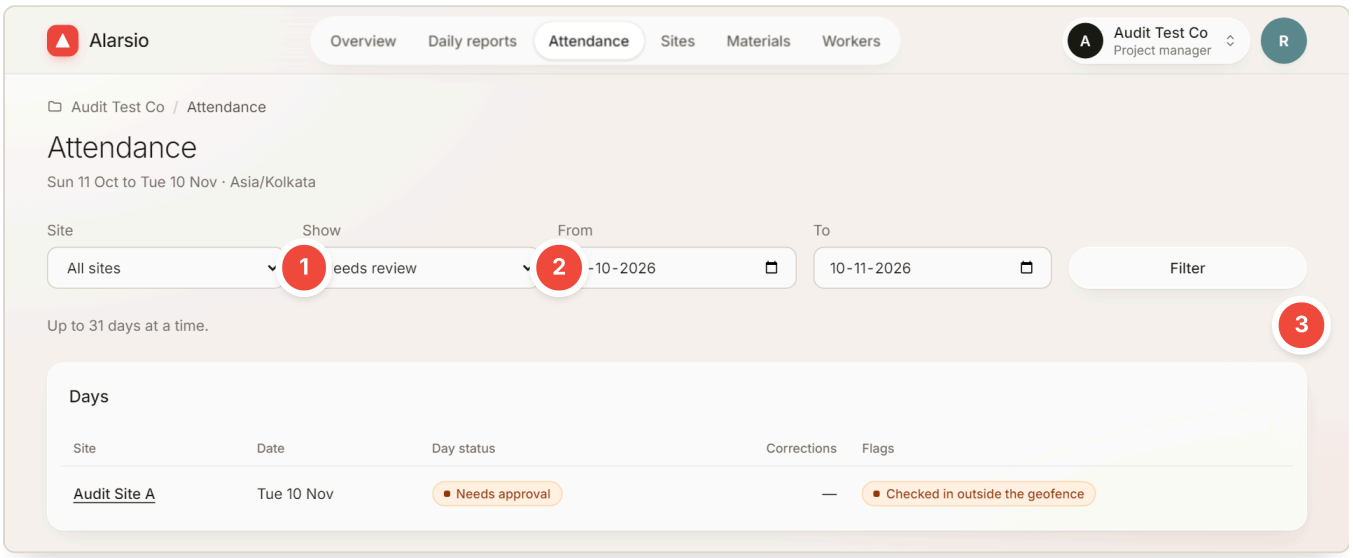

The phone shows an **estimate** of the balance (the server's balance at the last sync plus what you recorded since). The real balance is worked out by the server. Going below zero or under the low-stock level shows a warning but never stops you saving.

7 REVIEWING ON THE WEB

PROJECT MANAGER · OWNER · WEB

Managers check the field record on the web every day. The **Overview** (chapter 2.3) puts what needs action first.

7.1 Approve attendance

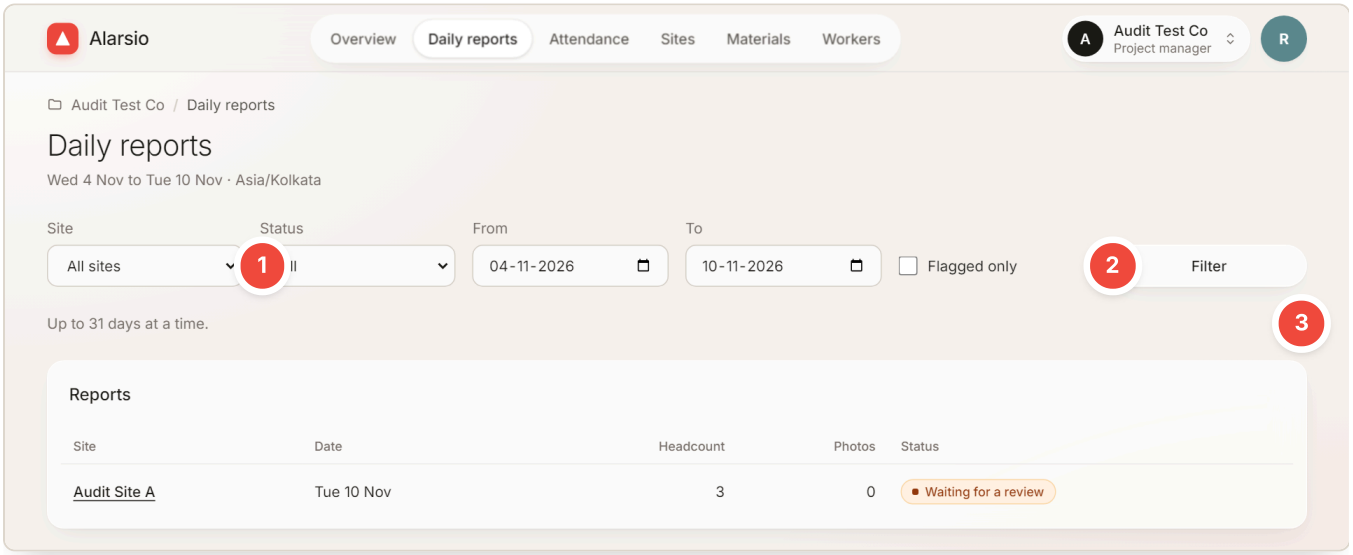

1. Filter by site.
2. Status: needs review, not reviewed, rejected, approved, or all.
3. Choose dates, up to 31 days at a time.

1. Open **Attendance**. Days needing a look are listed first: *Day waiting for review*, *Correction waiting*, *Checked in outside the geofence*.
2. Open a day. Check the entries, any outside-the-site check-ins with their reasons, and pending corrections.
3. Tap **Approve**, or **Reject** with a reason. Approve or reject each pending correction the same way.

> RULES
> Only **approved** days are paid. An approved day is locked: later changes arrive as corrections. Nobody reviews a day or a correction they recorded themselves; another manager or the owner must do it.

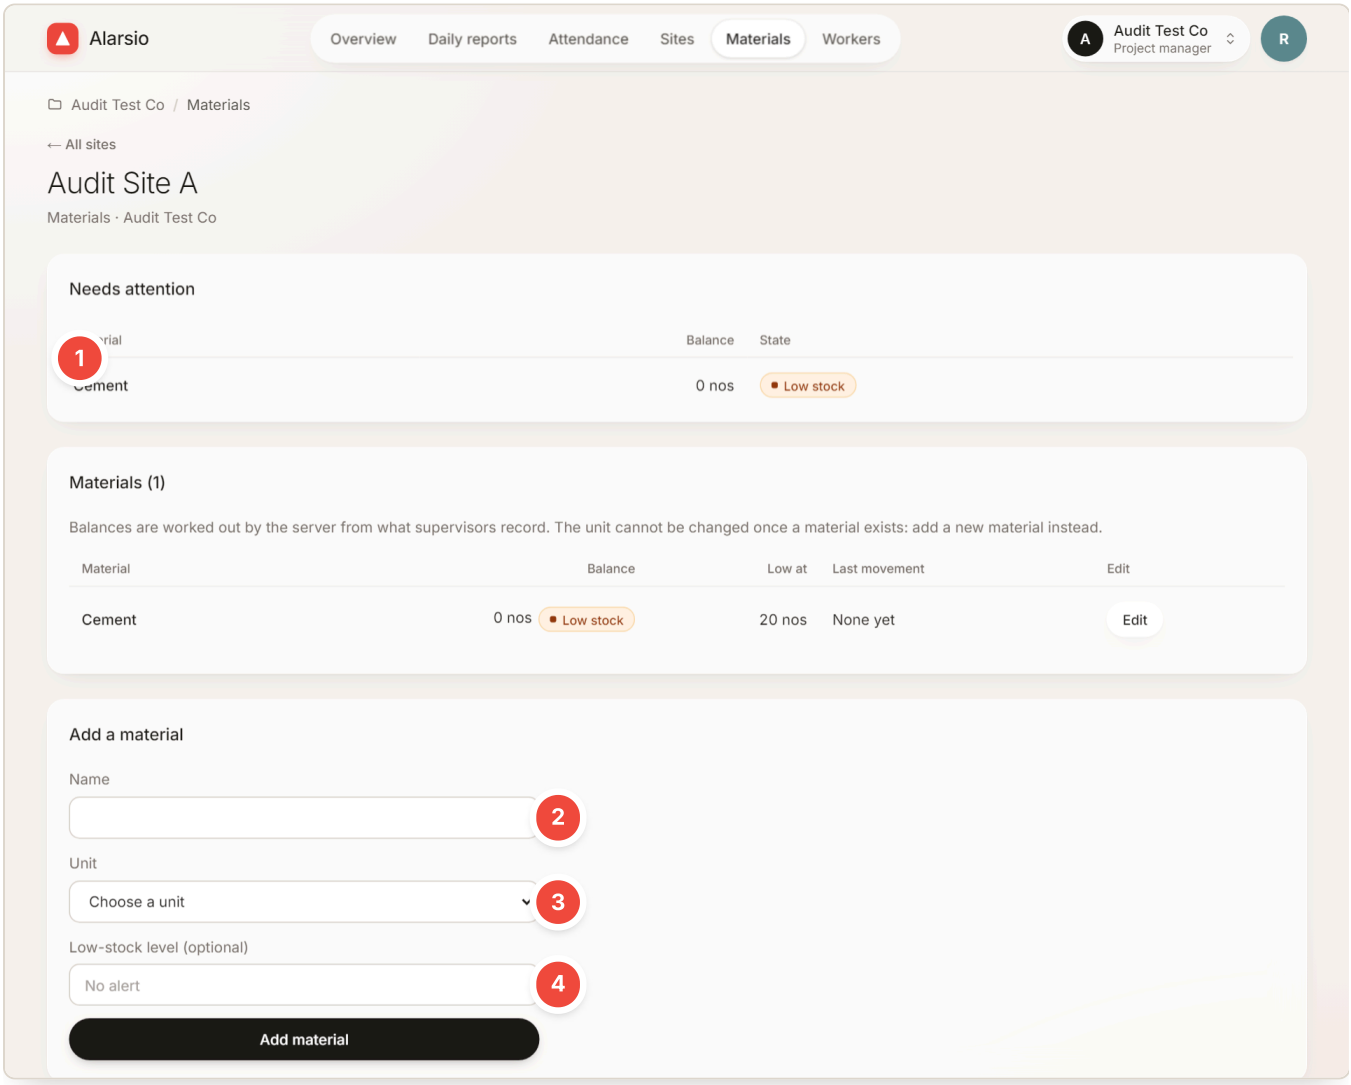

7.2 Review daily reports

1. Filter by site and status.
2. **Flagged only** shows reports with a serious blocker or safety incident.
3. Dates, up to 31 days.

Flagged reports are listed first. Open a report to see its text, photos and every earlier version, then tap **Mark reviewed**, or **Send back** with a note saying what to fix. The supervisor edits and resubmits it from the phone. A reviewed report is final.

7.3 Set up materials

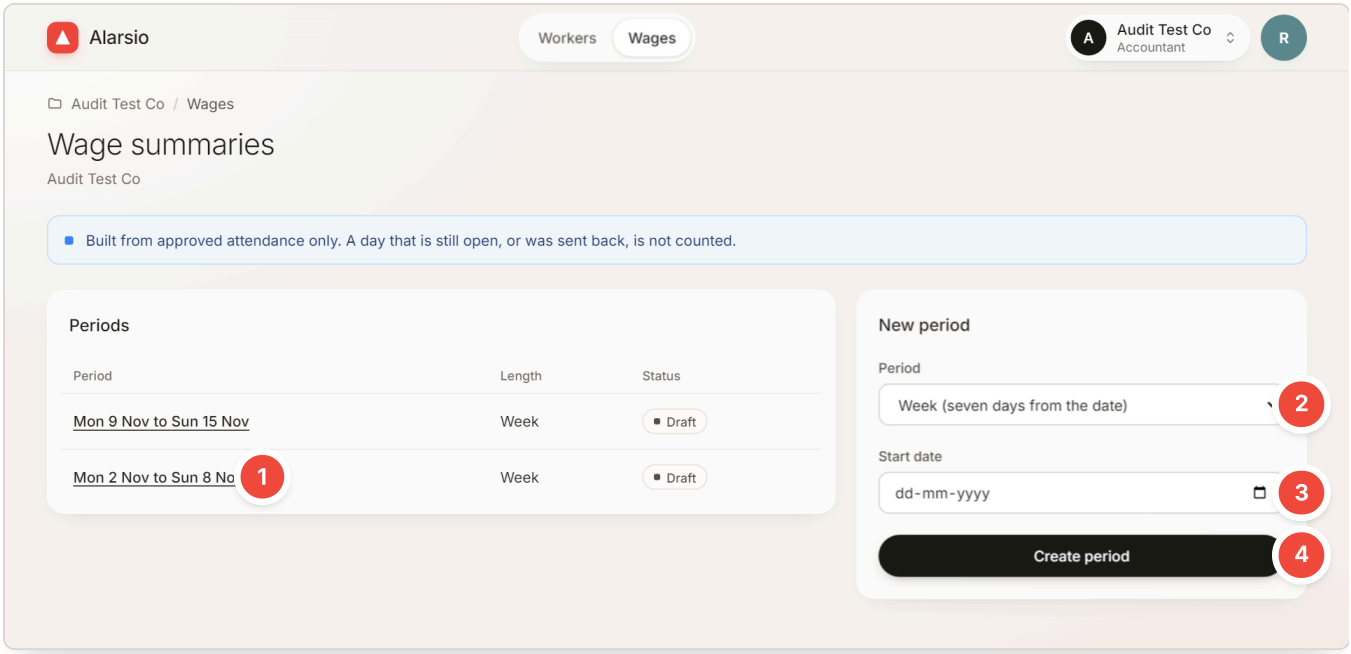

1. Materials at or below their low-stock level.
2. Material name, for example Cement.
3. Unit, such as bags or numbers. Fixed once created.
4. Low-stock level, or blank for no alert.

Open **Materials**, pick a site, add each material and tap **Add material**. Balances are calculated by the server from what supervisors record on the phone.

8 WAGE SUMMARIES

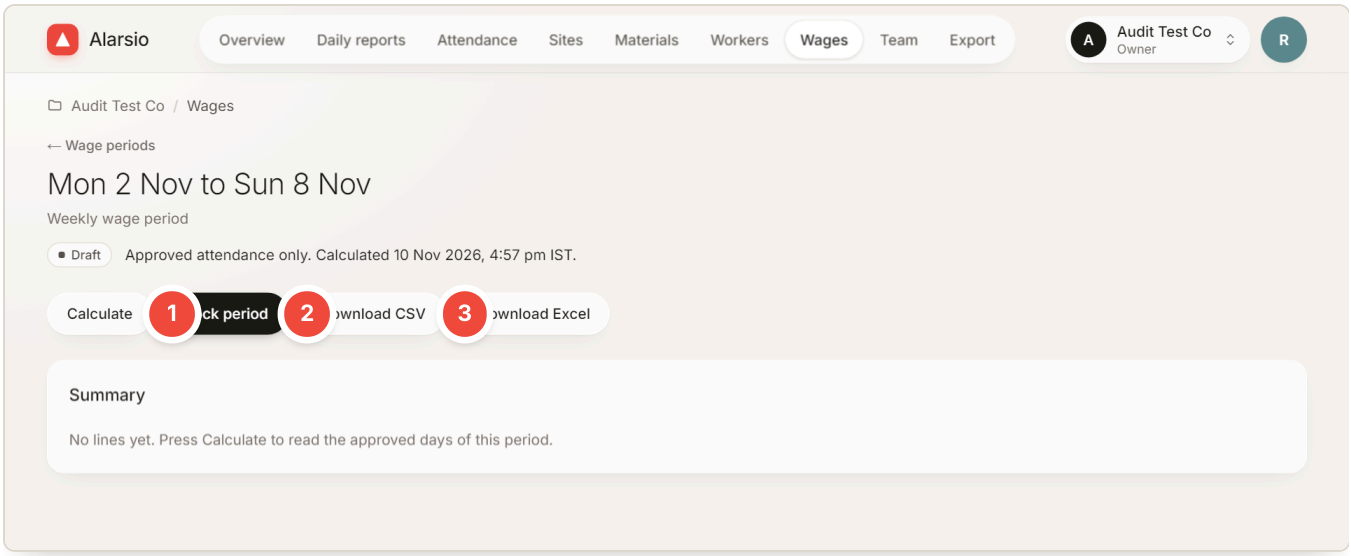

ACCOUNTANT · OWNER · WEB · WAGES

A wage summary turns **approved attendance only** into pay for a week or a month. A day that is still open or was rejected is not counted.

1. Your wage periods and their status.
2. Week (seven days from the date) or month.
3. The start date.
4. **Create period**.

1. **Create the period.** Choose week or month and the start date.
2. **Calculate.** Alarsio shows each worker's rate, payable days, overtime, adjustments and total, nothing hidden. Calculate again after more days are approved.
3. **Adjust if needed.** Pick a worker, enter an amount (negative to recover, up to ₹10 lakh either way) and a reason, then **Add adjustment**.
4. **Lock.** After the period has ended, tap **Lock period**. A locked period cannot change.
5. **Export.** **Download CSV** or **Download Excel**. The file matches the screen to the paisa.

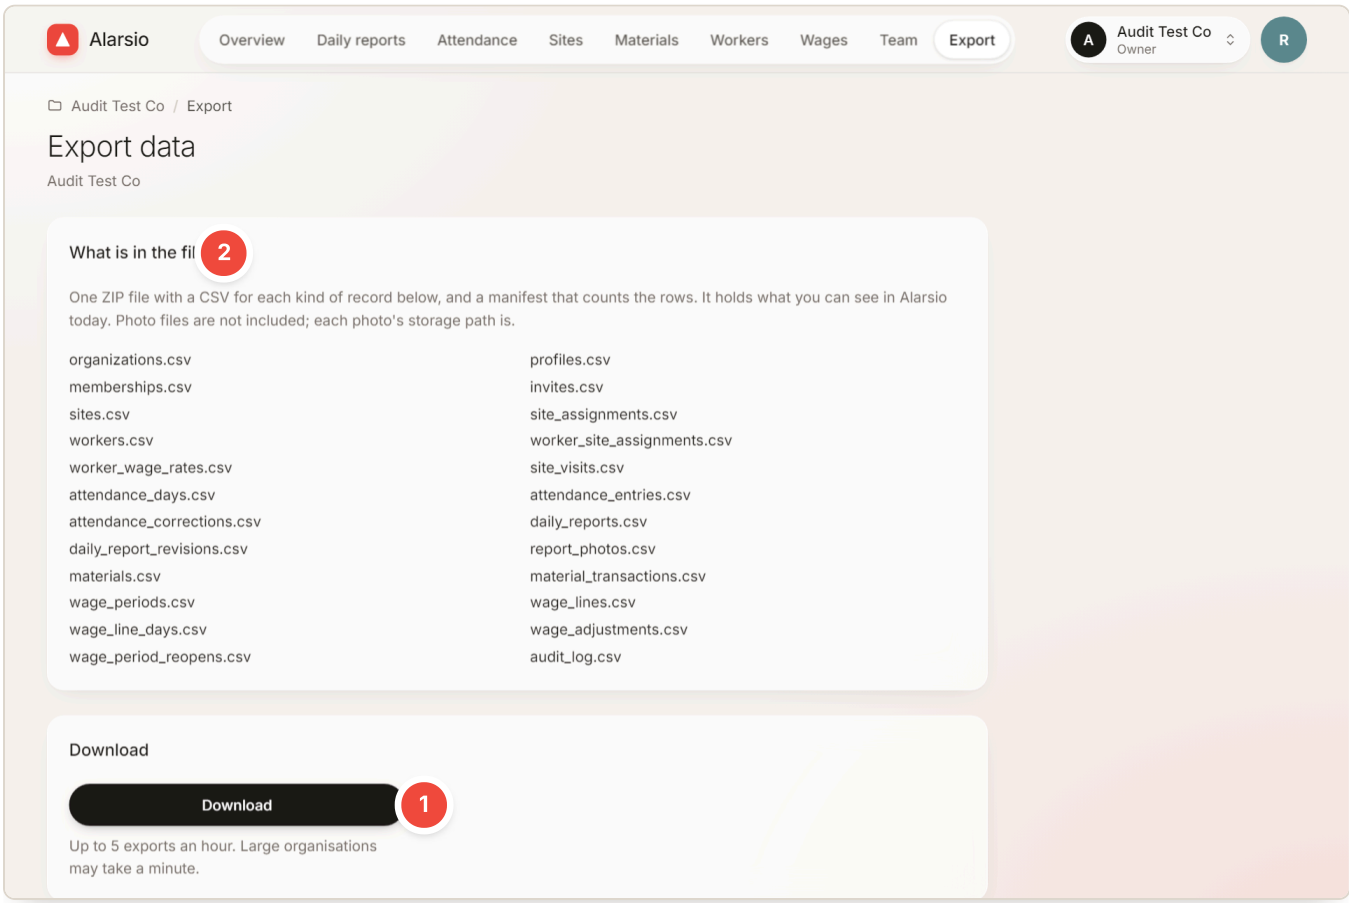

1. **Calculate** after more days are approved.
2. **Lock period** once the period has ended.
3. Download CSV or Excel.
4. Below the totals: adjustments, and (owner only, once locked) the reason to reopen.

LOCK AND REOPEN

A period can be locked only **after it has ended** and when every worker with payable days has a rate. An **accountant** may lock but never reopen. Only the **owner** can reopen a locked period, with a reason, and the reopen is recorded.

9 EXPORT YOUR DATA

OWNER · WEB · EXPORT

1 **Download**.

2 What the file contains.

Your data is yours. **Export** → **Download** gives one ZIP file with a spreadsheet (CSV) for each kind of record: members, invites, sites, workers, rates, attendance, reports, materials, wages and the audit log, plus a manifest that counts the rows. It can take up to half a minute. You can export **5 times an hour**.

Only the owner can export. Other roles see "Only its owner can export its data."

10 TROUBLESHOOTING

EVERYONE

YOU SEE	WHY	WHAT TO DO
The verification or invite email has not arrived	It can take a few minutes, or land in spam.	Check spam. For an invite, ask the owner to copy the invite link and send it on WhatsApp.
"This invite link is invalid, expired, revoked or already used"	Links work once, for 72 hours.	Ask the owner for a new invite.
"Email or password is wrong."	A typo, or a different email.	Use **Forgot password?** to set a new one by email.
The phone app says to use the web	You are an owner or accountant.	Use alarsio.com on a computer or phone browser.
"Your account is not part of a company yet"	You have not accepted an invite.	Open the invite link from your manager.
My site is not on the phone	You are not assigned to it, or the phone has not refreshed.	Ask your manager to assign you; connect once and open the app.
A worker is missing from the register	Not assigned to this site.	Ask your manager to assign them on the worker's page.
The app asks for a reason at check-in	You are outside the site's radius, or location is off.	Give the reason. If the pin is wrong, ask your manager to fix it.
Needs attention on a record	The server could not accept it, often because the day was already approved.	Open it. For an approved day, propose a correction instead.
"You can't record on this site any more."	The site was archived or you were taken off it.	Ask your manager.
Records stay "Offline"	No signal.	Move to a signal, open Sync, tap **Sync now**. Nothing is lost meanwhile.
"No connection. Will retry." / "Server busy. Will retry."	The connection dropped or the server is busy.	Nothing; it retries by itself.
"The app and the server disagree. Please update the app."	Your app is out of date.	Install the latest version from alarsio.com/download.
Choosing a worker file does nothing	The page had not finished loading.	Wait a few seconds and choose the file again.
"Lock period" is refused	The period has not ended, or a worker has payable days with no rate.	Wait until the period ends, or add the missing rate.

YOU SEE	WHY	WHAT TO DO
"You can export 5 times an hour."	The hourly limit.	Try again later.

10.1 Getting help

Open **alarsio.com/contact** for the support email, WhatsApp and phone. In the phone app, open **Help** for **Email support** and **WhatsApp support**. When you write, say which company, which site, what you tapped and what you saw, with a screenshot if you can.
